Observations from Customer Retention Analysis

- Based on the cohort retention matrix:
- Initial acquisition is strong, especially in early 2020 cohorts.

- However, monthly retention significantly drops after the 1st or 2nd month.
- Long-term retention (after 6 months) is minimal across cohorts.
- Only a few cohorts (e.g., Jan & Feb 2020) maintain some degree of customer engagement over time.

Interpretation:

- Initial onboarding and customer acquisition are effective.
- Lack of long-term incentives or communication may be causing customer churn.
- Seasonal trends may also influence retention, especially around the beginning of the year.
